Comments:

215. For plants one to two years old, apply 1/3 pound of 8-8-8 or 10-10-10 fertilizer each month from the beginning of growth through the end of July.

For a bush 12 to 15 feet tall, apply 4 pounds of 8-8-8 or 10-10-10 in late winter, early June, and mid-July. For plants less than 12 feet in height, use about 1 pound of 8-8-8 or 10-10-10 for each foot of height and split into three applications as given above. If the fruit are not reaching maturity and ripening properly, excess fertilizer or drought may be the problem and fertilization should be reduced.

NOTE: A pint of 10-10-10 fertilizer weighs approximately 1 pound; 3/4 pint of limestone weighs approximately 1 pound.
